

## DataKeeper™ Software Automatically Backs Up Windows Clients

DataKeeper™ is a Windows client-side application that monitors file activity while running in the background\*. Every time a file is saved to the client's local hard drive, DataKeeper saves a copy to a secure directory on any designated networked Snap Server (or other networked device). It operates in mobile mode, continuing protection while your PC is disconnected from the network and from your Snap Server. There are no profiles, no complex setups and no forgetting to do a backup!

**Enterprise-Ready** Smoothly integrate workstation backup into your corporate backup strategy by combining DataKeeper and one or more Snap Servers. Include Snap Servers in your server backup rotation and painlessly capture all the desktop backups.

**Flexible Backup and Restore** A simple, single-page user interface for managing backup options allows users to customize the frequency and quantity of their backups, the location of their backup files and the quantity of archived backups. The same user interface allows users to restore files from their backup location with no technical assistance or intervention.

**Versioning & Archiving** Because DataKeeper allows multiple, time-sensitive backup versions to be stored, users may recover data from earlier versions of files. This feature allows recovery from inadvertent

saves of active files and from virus attacks or infected macros and templates.

**Mobile Mode** When a portable computer is disconnected from your company network, DataKeeper will archive backup files in a local directory on that computer. When the portable is reconnected to the network, DataKeeper will move this archive to the user's designated Snap Server and resynchronize all backup files. This provides end-to-end data protection, even for users on the road.

**Remote Access** Recovery of user data files may take place from any networked system. DataKeeper does not have to be installed on a client system to recover files from backup. Standard file compression software (such as WinZip® or PKZIP®), a network connection and a browser are all that is required. Restore a single file, the most recent version of a file or an older version from any point on your network.

### DataKeeper Key Features

- Real-time Set-and-Forget Backup for Windows Clients
- Backs Up and Protects Both Desktop and Mobile Users
- Unlimited User License
- Integrates Workstation Backup into Any Corporate Strategy
- Simple to Install and Maintain

\* There is no noticeable performance decrease when running DataKeeper as a background application on a Windows PC.

# PowerQuest DataKeeper Backup Software

## Client Requirements

Processor	486DX/66 MHz or higher
RAM	8MB (Windows 95) 16MB (Windows 98) 32MB (Windows NT 4.0 Workstation) 32MB (Windows 2000 Professional) 32MB (Windows Me) 32MB (Windows XP Home Edition and Professional)
Hard Disk Space	4MB
File Systems	FAT, FAT32 or NTFS
Operating System	Windows 95b (or later) Windows 98 Windows NT 4.0 Workstation (through Service Pack 6) Windows 2000 Professional Windows Me Windows XP Home Edition and Professional
Network Protocols	Microsoft Networking over TCP/IP
Monitor	VGA or higher resolution
Network Connection	Ethernet connection to one or more Snap Servers (with operating system software v2.1 or later) or other network attached device

## Management

Graphical User Interface (GUI) for User Share Creation  
Error Notification Through Activity Log  
Flexible Command-Line Interface Allows Job Scheduling, Run-on-demand and Set-and-Forget Options

## Language Support

English  
French  
German  
Spanish

## Security

Password Protection  
Compression  
Fault-Tolerant Backup Sets

## Compression

WinZip/PKZIP compatible compression encoding for basic archive operations
